Come say hi during the break: feedback, talk ideas and venue offers are always welcome.

Speakers & Talks

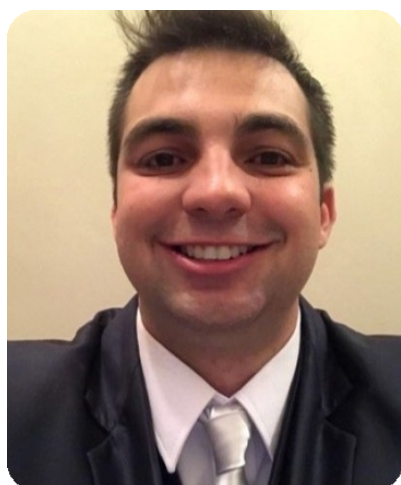

TALK 1

What is technical management in OutSystems

Faster development also means failing faster. Keeping an OutSystems ecosystem healthy, with sustainable technical debt and room to scale, takes deliberate technical leadership: implementation guidelines grounded in best practices, centers of excellence, and continuous training for everyone contributing to the ecosystem.

Ricardo Pereira

OutSystems Factory Manager | Tech Lead

TALK 2

Building a Modern Event-Driven Data Platform with AWS & Snowflake

A real-world architecture for a customer that needed fresh data every 2 to 5 minutes: an event-driven flow where the only scheduled component is the extraction from the source API. EventBridge, Lambda, Amazon S3 and SNS integrate with Snowflake through Snowpipe Streaming and Dynamic Tables, with the decisions, trade-offs and lessons learned in production.

Rafael Arruda

Data Engineer at Best in Bi Solutions

Agenda

18:30

Check-in & Networking

19:00

Welcome & Intros

AWS User Group Porto, OutSystems User Group Porto & Partners
